

PARKINSON

National Centre of Excellence in Research

Device-based Assessment in the Luxembourg Parkinson's Cohort

Dr Christian Stallinger

Luxembourg Center for Systems Biomedicine

Centre Hospitalier de Luxembourg

Fonds National de la
Recherche Luxembourg

THE NATIONAL CENTRE OF EXCELLENCE IN RESEARCH (NCER)
IS AN INITIATIVE OF THE LUXEMBOURG NATIONAL RESEARCH FUND

What exactly is Parkinsonism?

Parkinsonism

is the combination of

Motor symptoms

- **Bradykinesia**
- Rigidity
- Tremor
- (postural instability)

Non-motor symptoms

- Obstipation
- Orthostatic hypotension
- Hyp-/anosmia
- Bladder dysfunction
- Paraesthesia/pain
- Depression
- Hallucinations
- Sleep disorders
- Bradyphrenia
- ... ff.

Parkinsonism **IS NOT JUST** Parkinson's Disease

- **PD: many names for one disease**
 - Idiopathic Parkinson's Syndrome
 - Typical Parkinson's Disease
 - Sporadic Parkinson's Disease
- **Some rare diseases look like „Parkinson's“ (but aren't)**
 - Atypical Parkinson syndromes
 - MSA, PSP, CBD,
- **symptomatic Parkinson's syndromes**

Diagnosis and follow-up today

- No “Parkinson’s-Test” available
- Diagnosis is made rather **late**

→ **Clinical diagnosis !**

From a doctor's point of view...

- **Early and correct** diagnosis remain **challenges**
- **Generally helpful, but current clinical scales have limitations**
 - **Subjective**
 - **Not receptive** to short term/gradual changes (... related to disease stage and progression)
 - Not very good at **prediction** (e.g. OFF, freezing)
 - **Discriminating** forms of Parkinsonism

Our goals in the Luxembourg Parkinson's Cohort

- **Better understanding of PD causes and progression**
- **Earlier diagnosis**
 - Today, at the time of diagnosis, **more than half of the cells in the substantia nigra are already dead**
- **Finding causal treatment options**
 - Today, the symptoms of PD **can be treated well** with drugs and deep brain stimulation
 - **BUT**: so far, no treatment has slowed down progression
- **Stratification of PD patients will help making personalized medicine possible**

The Luxembourg Parkinson's Cohort

- Parkinson's patients in **all disease stages**
- Patients with **atypical Parkinson** syndromes

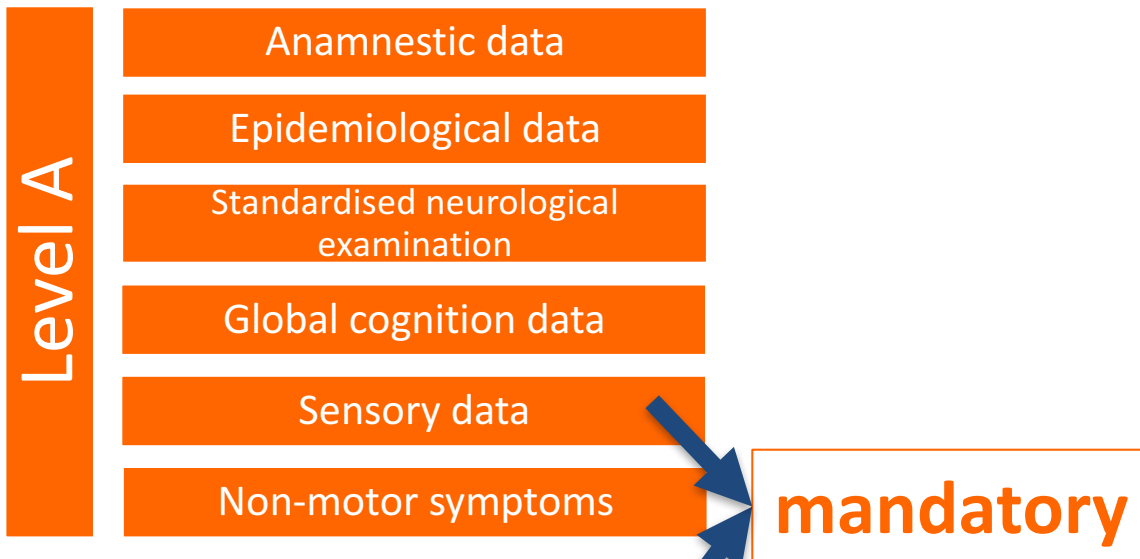

- **People without Parkinson's** as healthy controls

Our approach: deep phenotyping

Clinical data collection

Biological data collection

Fluctuations as an example for a clinical challenge

Hyperkinesia

Hypokinesia (OFF)

X = clinical visit

time

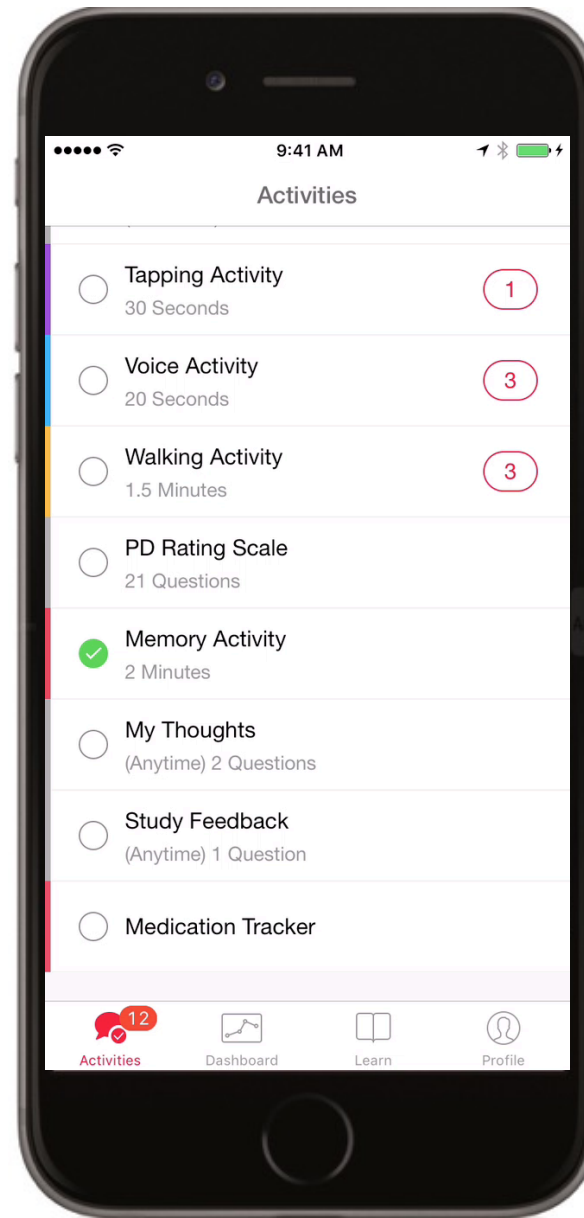

Device-based assessment in Luxembourg

eGaIT

Sensor-based Movement Analysis

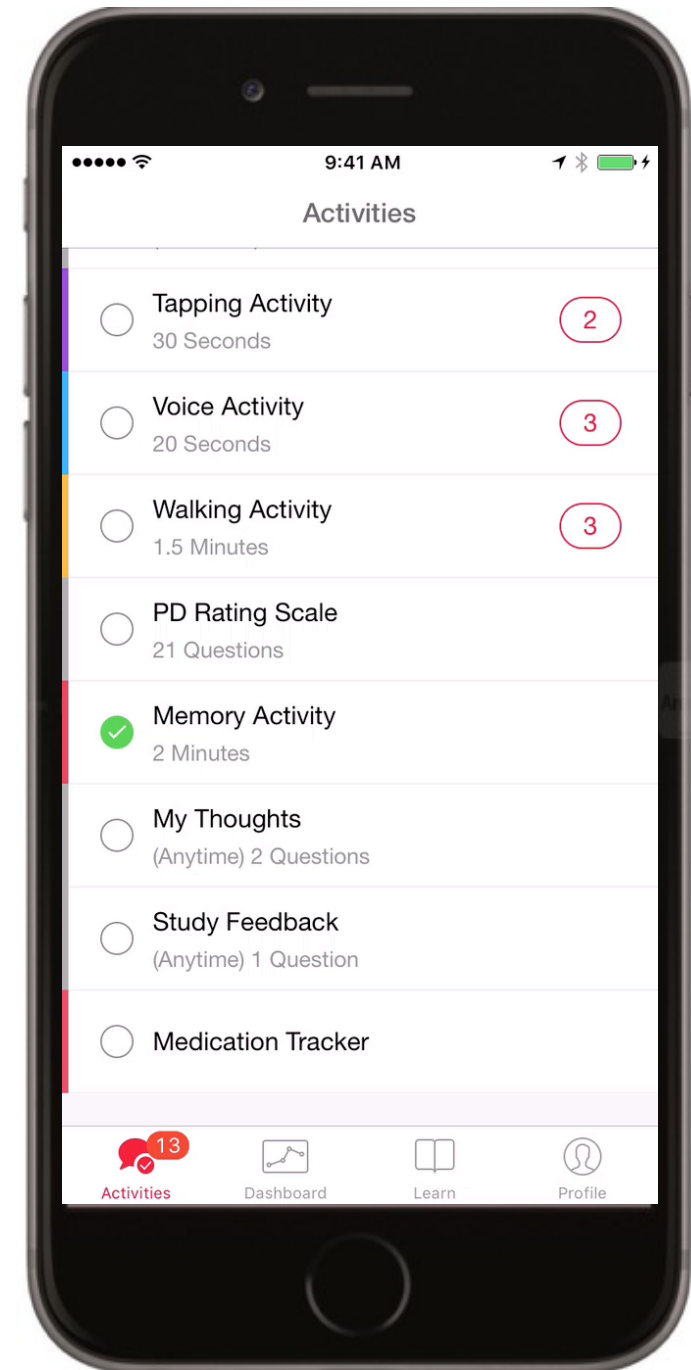

mPower – Bradykinesia

Finger tapping

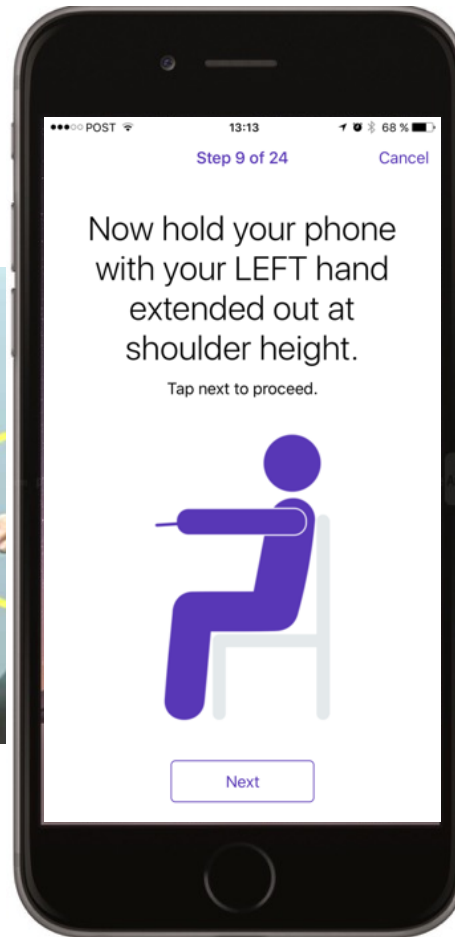

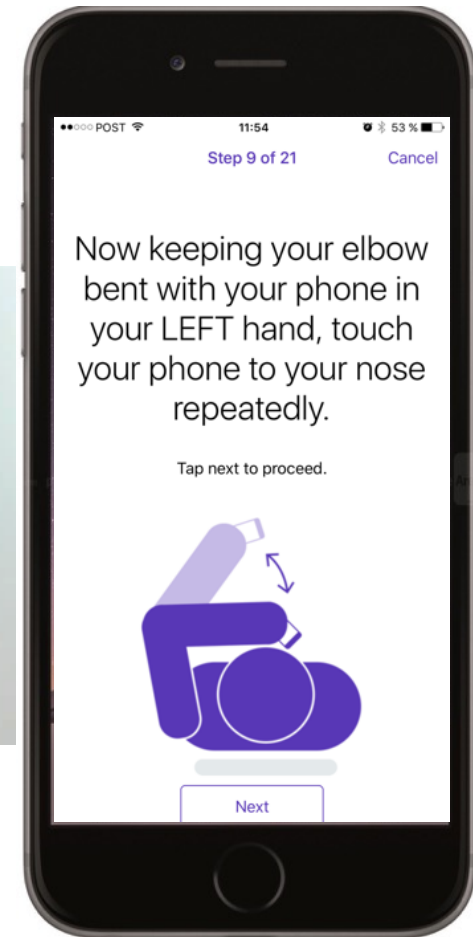

mPower – Tremor analysis

Resting tremor

Postural tremor

Action tremor

mPower – Voice analysis

Before medication

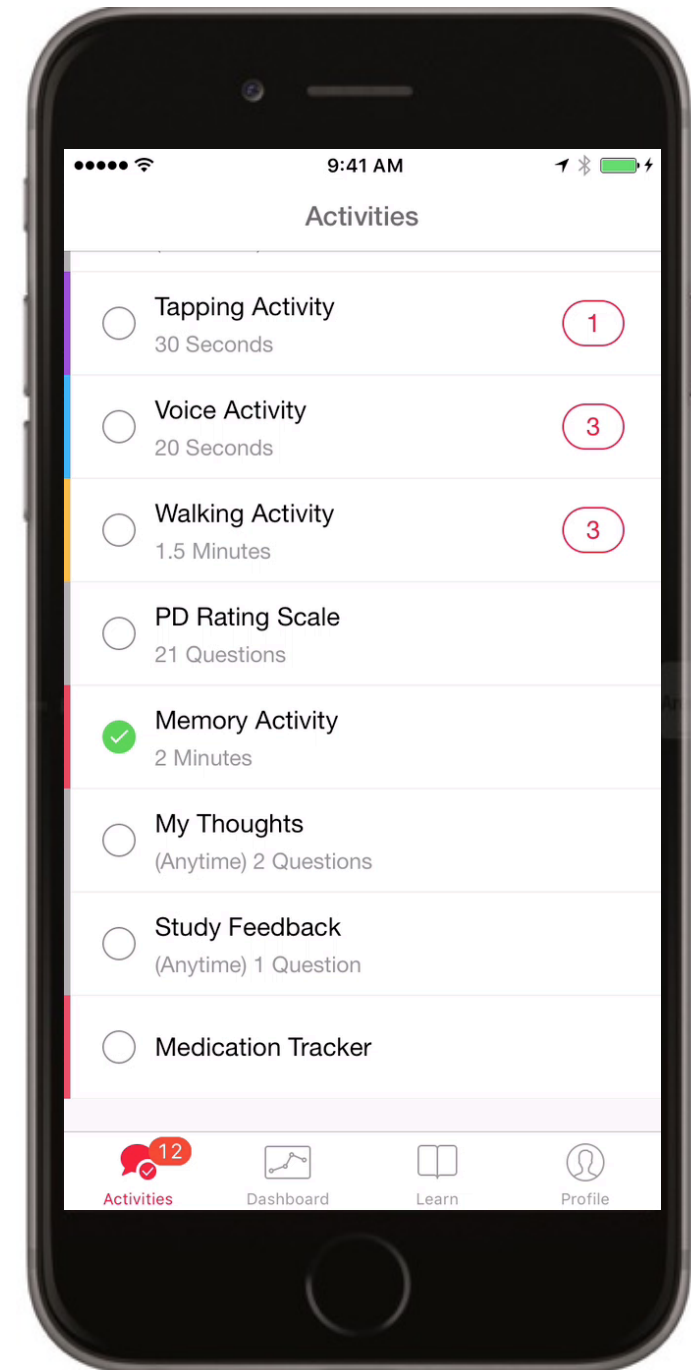

After medication

mPower – memory test

mPower – gait analysis

mPower – first findings...

Before medication

After medication

Tapping count, male PD patient, left hand

mPower – adherence

Overall count for mPower activities

Cumulative task count for individual participants

mPower – adherence

Cumulative participation for activities over time

ancillary tests**

Genetics

Requirements for clinical management of PD with DBA

1. It provides a **valid and accurate** parameter of a clinically relevant feature of the disease
2. there is confirmed evidence that the parameter has an ecologically **relevant** effect on the specific clinical application
3. a target range can be defined wherein the parameter **reflects the adequate treatment response**
4. implementation is **simple** to allow repetitive use
