LECTURE

CHL - Centre
4, rue Ernest Barblé
L-1210 Luxembourg
Room: Amphitheatre

11.30-12.30pm

MEET THE SPEAKER *

Light snacks provided
LIH, 1A-B, rue Thomas Edison
L-1445 Strassen
Room: Curie/Pasteur (3rd floor)

12.45-2.00pm

*Registration is mandatory to meet the speaker by sending an email to tania.zamboni@lih.lu

Use of e-health as interface in patient-physician communication

ABSTRACT

e-health can have a major influence on patient-physician communication. All the new modes of electronic communication (e-mails, portal, apps, electronic medical record ± shared medical notes, tele-expertise, tele-consultation) can change the patient-physician relationship through different contact with physicians. Moreover the new instant exchange of medical data combined with increased use of PROMs/PREMs (patient-reported outcomes/experience measures) change the information available to both patients and clinicians with a potential impact on relationship.

Digital health literacy is defined as the *ability to seek, find, understand and appraise health information from electronic sources and apply the knowledge gained to addressing or solving a health problem*. It therefore becomes an important issue to ensure that social inequalities will not increase.

After this general introduction, the speaker will discuss the importance of digital literacy in this context and will focus on two examples linked to his research interests in oncology:

- > an example of how oncologist use ePROMs to modify the content of medical encounters;
- > an example of the development of research recruitment through online communities of patients.

SPEAKER

Prof Julien Mancini

Professor of Public Health at Aix-Marseille University,
Leader of the Research Group "Cancer, Biomedicine & Society"
UMR1252, SESSTIM (France)
