# Factors Determining the Success and Failure of Digital Health Interventions

Frances S Mair

Norie Miller Professor of General Practice

University  
of Glasgow

# Acknowledgements

Funders who have supported two decades of research:

- CSO, SDO, NIHR, Innovate, Northwest R&D, BHF, Marie Curie, EU (Horizon 2020), ESRC.

Wide range of excellent colleagues across the world but especially Profs Carl May, Kate O'Donnell, Victor Montori, Tracy Finch and Drs Katie Gallacher and Marilyn Lennon.

## Layout of My Talk.....

- Context
- Experience From A National Deployment
- Can Theory Help?
- Key Implementation Issues to Consider
- Putting Users at the Centre Of Design
- Engaging with Users
- Concluding Thoughts

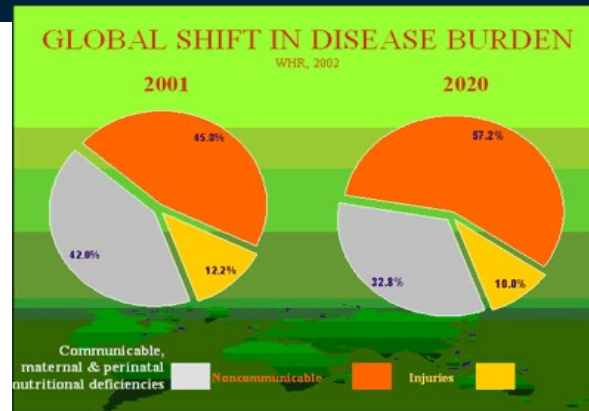

University  
of Glasgow

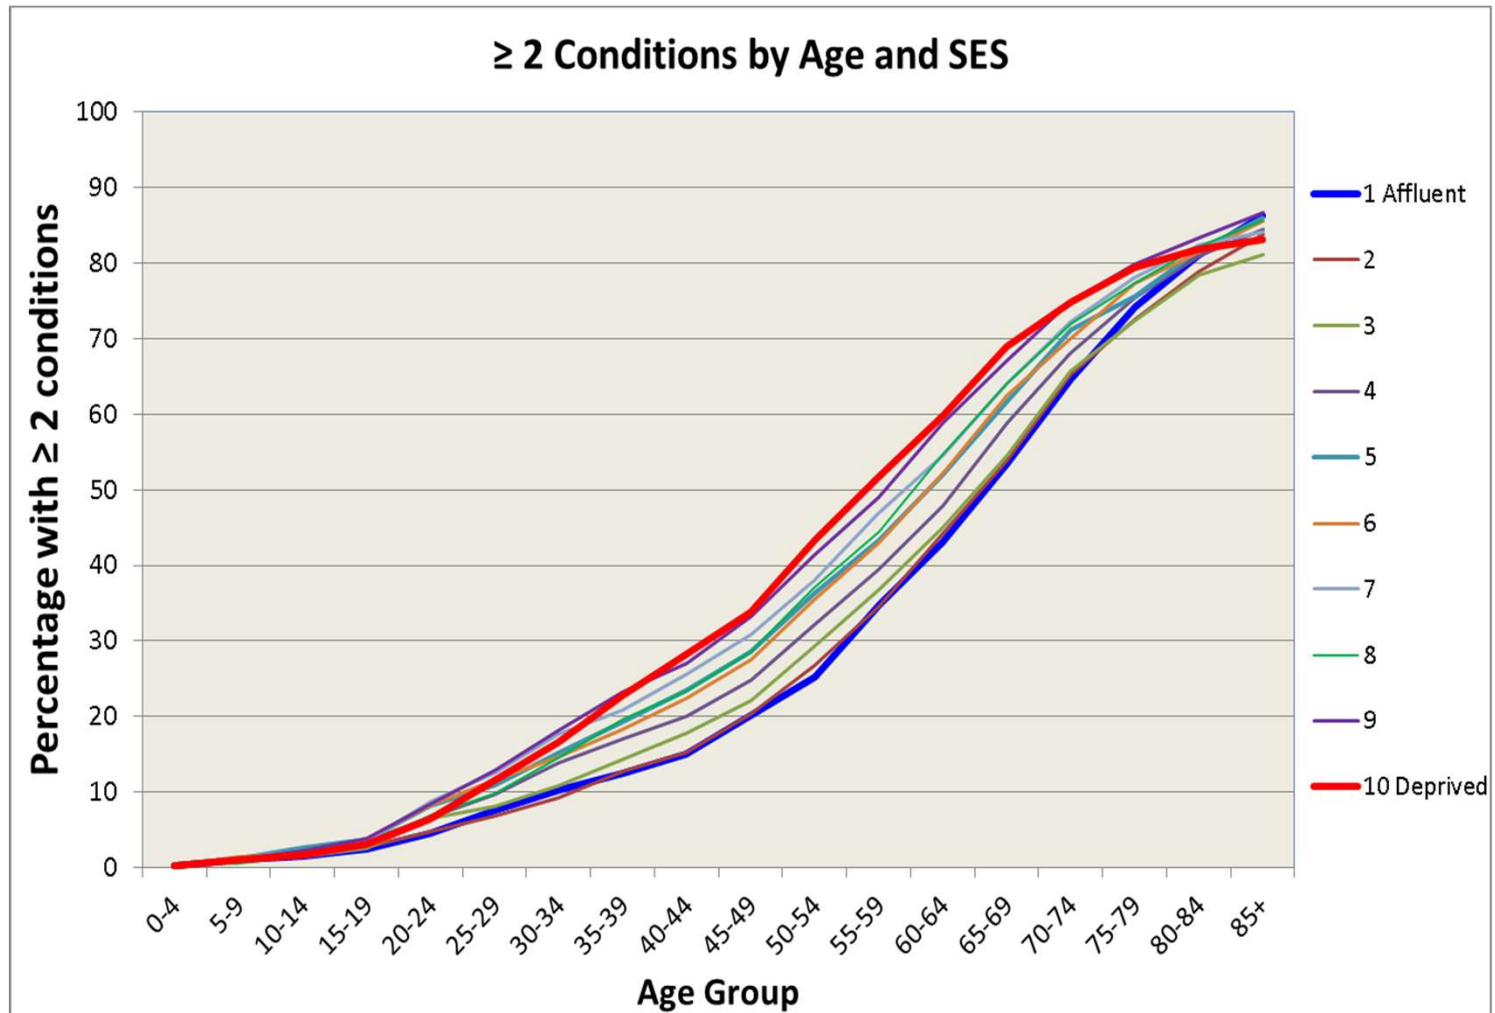

## Enthusiasm for New Technologies in Health Care Delivery

- The possibilities that new technologies/health informatics present to health care systems; practitioners, and carers and patients are considerable.
- Policymakers have been quick to recognise the possibilities of new technologies in the health service.
- BUT new technologies have often struggled to become part of routine service delivery.

# THE RISE OF NON-COMMUNICABLE DISEASES

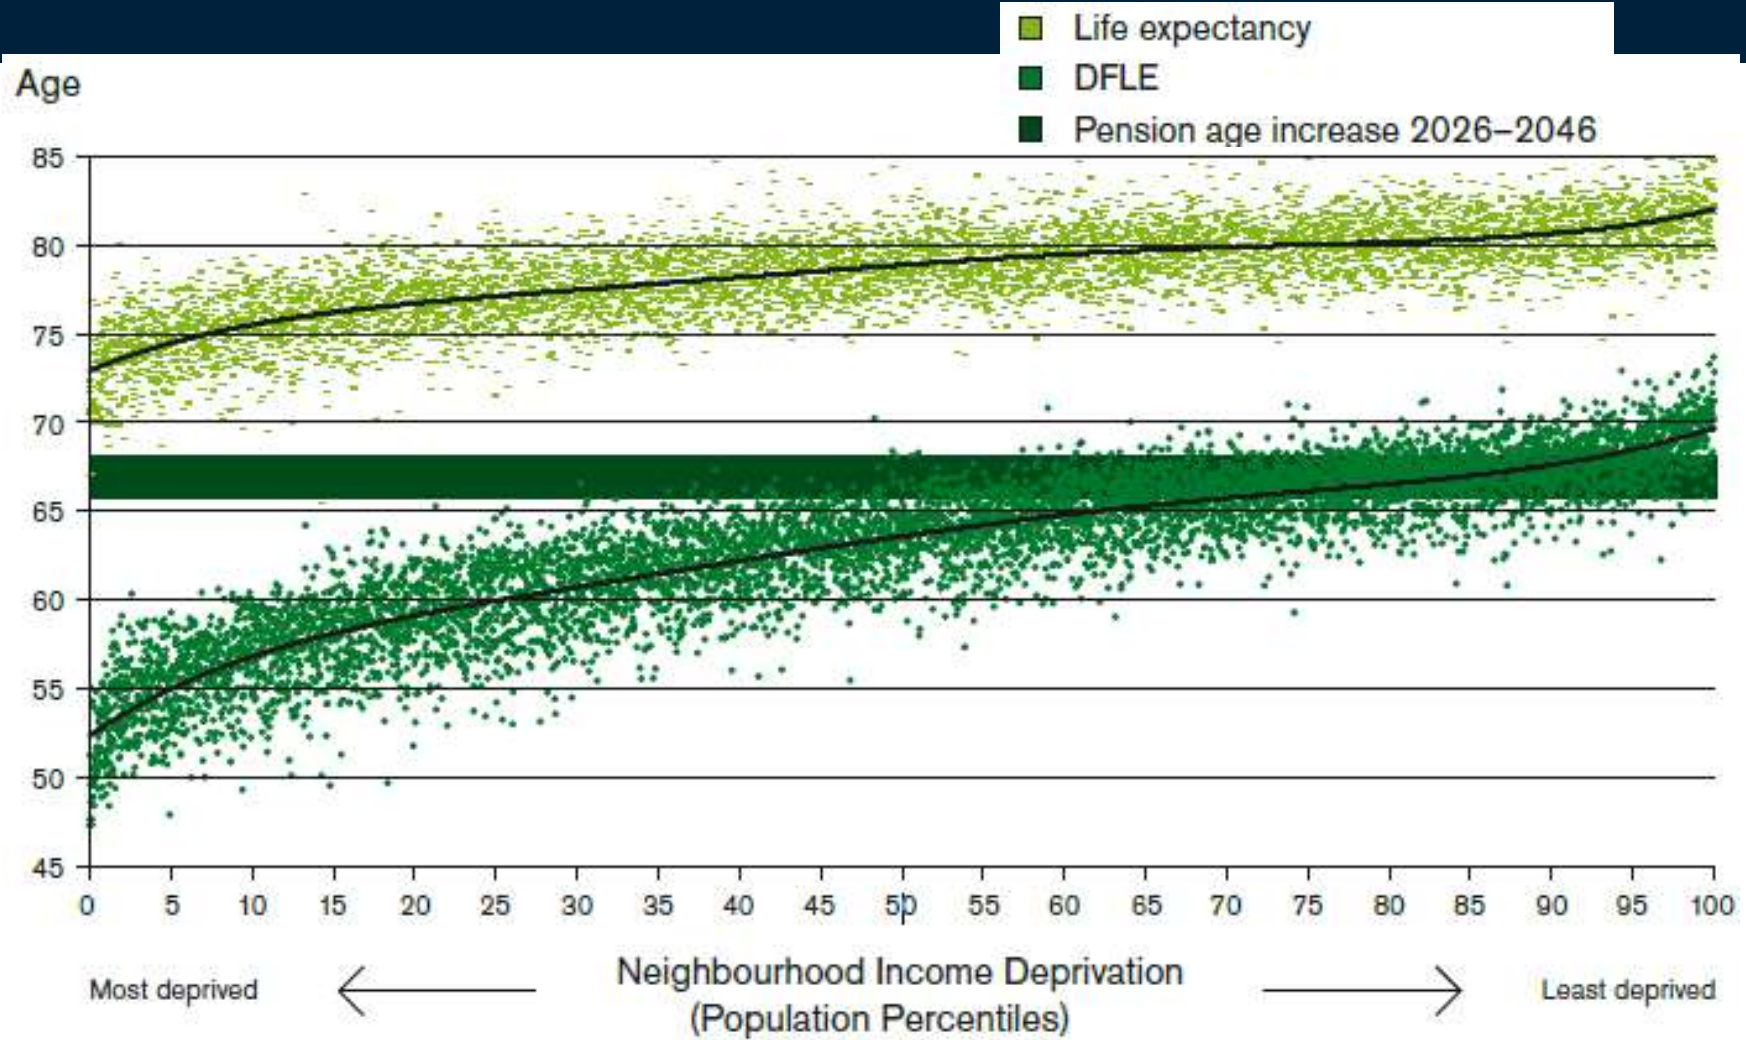

Barnett, K., Mercer SW et al. (2012) *Epidemiology of multimorbidity and implications for healthcare, research, and medical education: a cross-sectional study. Lancet*, 380 (9836). pp. 37-43

Life expectancy and disability-free life expectancy (DFLE) at birth, persons by neighbourhood

While new technologies are subject to very rapid development, the professional, organizational and institutional terrain on which this technology is set in play is much less amenable to change.

- Implementing and embedding new technologies of any kind involves complex processes of change at the micro level for professionals and patients and at the meso level for health-care organizations themselves.
- EU has argued that implementing e-health strategies “*has almost everywhere proven to be much more complex and time-consuming than initially anticipated*”

# Insufficient attention paid to implementation issues

- When you introduce a new technology you are seeking to influence *how people think, act and organise themselves*.
- True of all types of digital health
  - **EMR**
  - **CDSS**
  - **Apps**
  - **Telehealth**
  - **Sensor based technologies etc.....**

University  
of Glasgow

The  
Translational  
Gap Remains  
Wide.....

University  
of Glasgow

Implementing new technologies  
necessitates changes in *expertise*  
and *actions*

- Getting new technologies used in practice so that they become routinely embedded in social contexts is the result of people working, individually and collectively, to implement them.
- Important to also take a “whole systems view”

# Considering Macro, Meso and Micro Issues

# Recommendations

- Invest in infrastructure (national and local)
- Brand Trust and Confidence is Crucial – Consider Accreditation/Kitemarking
- Interoperability (may need incentivised)
- Invest in Engagement and Enablement
- Make digital health services more accessible .

- The importance of tailoring to meet user's needs – self management is only one part of the workload in a person's life
- Co-design
- Engagement and Enablement
  - The need for investment in upskilling to promote access and expedite uptake and utilisation of digital health and wellbeing technologies.
- Infrastructure
- Accreditation/Quality Assurance
- Policy (Data privacy regulations etc)

- So what factors will inhibit or promote the implementation and embedding of health informatics interventions in clinical practice in different settings: primary care, hospital, community and home?
- What needs to be considered?

University  
of Glasgow

In the context of digital health interventions.....

Participants: Are all those involved in operationalising these technologies:

e.g. Practitioners

Health service managers

Public/Caregivers/Wider Family

Wider Community

Policymakers

## Normalisation Process Theory (NPT) – can help .....

Construct	What it addresses
Coherence	Can stakeholders make sense of a new health informatics intervention?
Cognitive Participation	Can stakeholders get others involved and engaged with implementation of the new technology?
Collective Action	What has to be done to make the technology work in routine practice?
Reflexive Monitoring	How can use of the technology be monitored and evaluated?

**Thinking about doing**

Coherence

Cognitive  
Participation

Reflexive  
Monitoring

Collective  
Action

**Doing the doing**

Courtesy of Prof Kate O'Donnell

- Are the key attributes of the new technology easy to describe?
- Is the planned health informatics intervention different/distinct from other established ways of working?
- Are all the relevant individuals clear about what specific tasks and responsibilities will be reqd of them during implementation of the new technology?
- Do participants have a shared understanding of what is hoped to be achieved by introducing the new technology?
- Do individuals understand the value, benefits and importance of the new technology; and for whom?

- So for a new health informatics intervention..
  - **Is the rationale for the new technology clear?**
  - **Will benefits be valued by participants?**
- 
- OR will it all just be perceived as just more work.....?

University  
of Glasgow

## Cognitive Participation - Engagement

- How much will individuals commit to and engage with implementing the new technology
- How much they are able to get others to buy-into the innovation. (Often referred to as enrolment).

### Key questions:

- Are people prepared to invest time, energy and work in implementing and sustaining the new technology in practice?
- Do they think this is a legitimate use of their time?

University  
of Glasgow

# Achieving “Buy In” Can Be A Struggle!

University  
of Glasgow

# Will the new technology be seen as a good idea?

- *Will people be prepared to invest time, energy and work in implementing the new technology and sustaining it in practice?*

MAYBE or MAYBE NOT?

University  
of Glasgow

## Collective Action : Does it Help?

- What do people have to do to make the new technology work in practice?
- How does the new technology affect the work of individuals?
- Does the technology change existing work at all e.g. are new staff required?
- Does the technology make existing work easier or harder?
- Do staff have confidence in the new technology?
- Do staff need training before using the technology?
- Will organisations support the deployment of the new technology?

- How are users likely to perceive the new technology once it has been in use for a while?
- Is the technology intervention likely to be thought of as advantageous e.g .for staff, for patients?
- Will the effects of the new technology be easily identifiable?
- Can relevant participants contribute to feedback about the technology, once it is in use?
- Can the new technology be adapted/improved on the basis of feedback and experience?

University  
of Glasgow

- What mechanisms are in place to allow individuals to provide feedback on the new technology?
- What scope is there for iterative development?

University  
of Glasgow

NPT Toolkit provides a simple way to think through key  
issues around implementation, embedding, and integration  
<http://www.normalizationprocess.org/>

The screenshot shows a web browser window displaying the NPT website. The browser's address bar shows "Home - Normalization Process Theory". The website has a navigation menu with buttons for "HOME", "ABOUT US", "CONTACT US", "FAQ", and "LEGAL". The main header features the "NPT Normalization Process Theory" logo and a search bar. Below the header is a navigation bar with links for "What is NPT?", "NPT Toolkit", "How do you use NPT?", "Theory behind NPT", and "Bibliography". The main content area contains a paragraph explaining the website's purpose and a list of links: "ways to use", "basic concepts", and "toolkit". Below this is the ESR&C logo and a contact form titled "Tell us what you think" with fields for Name, Organisation, Email, and Comments.

**NPT** Normalization Process Theory

Search

What is NPT? NPT Toolkit How do you use NPT? Theory behind NPT Bibliography

The NPT website is here to help you think through implementation and integration problems in health care. Whether you're involved in technological innovations, testing complex interventions, or implementing and evaluating any new way of thinking, working, or organising change in healthcare

If you are a researcher, clinician, manager, or someone else who has to practically implement and integrate some form of innovation, this website could help you. It will guide you through [ways to use](#) Normalization Process Theory, some of the theory's [basic concepts](#), as well as offer you a [toolkit](#) to help you think about your implementation problems.

# WHAT ARE THE IMPLICATIONS OF NEW DIGITAL HEALTH INTERVENTIONS FOR PUBLIC AND CAREGIVERS?

- Courtesy of BMJ 29 august 2009 Vol 339. May, Montori and Mair. We need Minimally Disruptive Medicine.

# EDITORIALS

---

## Thinking about the burden of treatment

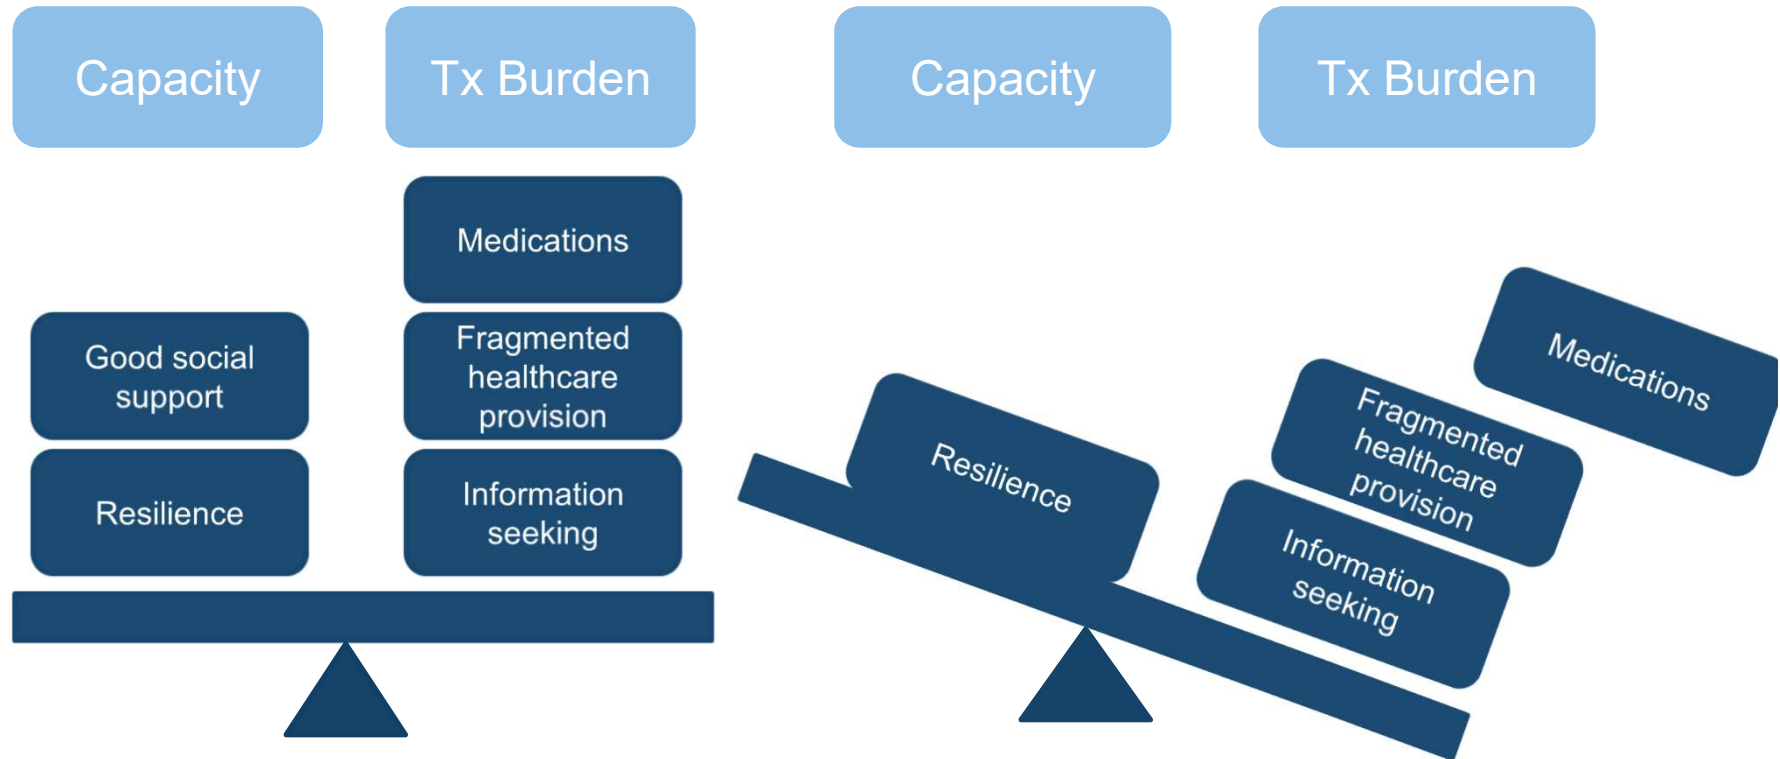

Should it be regarded as an indicator of the quality of care?

Frances S Mair *professor of primary care research*<sup>1</sup>, Carl R May *professor of healthcare innovation*<sup>2</sup>

<sup>1</sup>Institute of Health and Wellbeing, College of Medical, Veterinary and Life Sciences, University of Glasgow, Glasgow G12 9LX, UK; <sup>2</sup>NIHR CLAHRC, Faculty of Health Sciences, University of Southampton, UK

# Coping Threshold

1. Gallacher K, May CR, Montori V, Mair FS. Treatment Burden in Multimorbidity. In ABC of Multimorbidity. 2014
2. Leppin A, Gionfriddo MR, Kessler M, Brito JB, Mair FS, Gallacher K, Wang Z, Erwin PJ, Sylvester T, Boehmer K, Ting HH, Murad H, Shippee ND, Montori VM. Preventing 30-Day Hospital Readmissions A Systematic Review and Meta-Analysis of Randomized Trials. JAMA Internal Medicine. 2014.

University  
of Glasgow

Life Workload – self-management workload  
is only part of the workload in a person's life!

- WHO IS AT RISK? – EVERYONE!
- ALL THOSE WITH CAPACITY ISSUES
- Those with LTCs especially Multimorbid
- Vulnerable: migrants, those with learning difficulties,
- Those with health literacy issues, socially isolated, mental health problems, addiction problems, those lacking good social support networks and so on.....

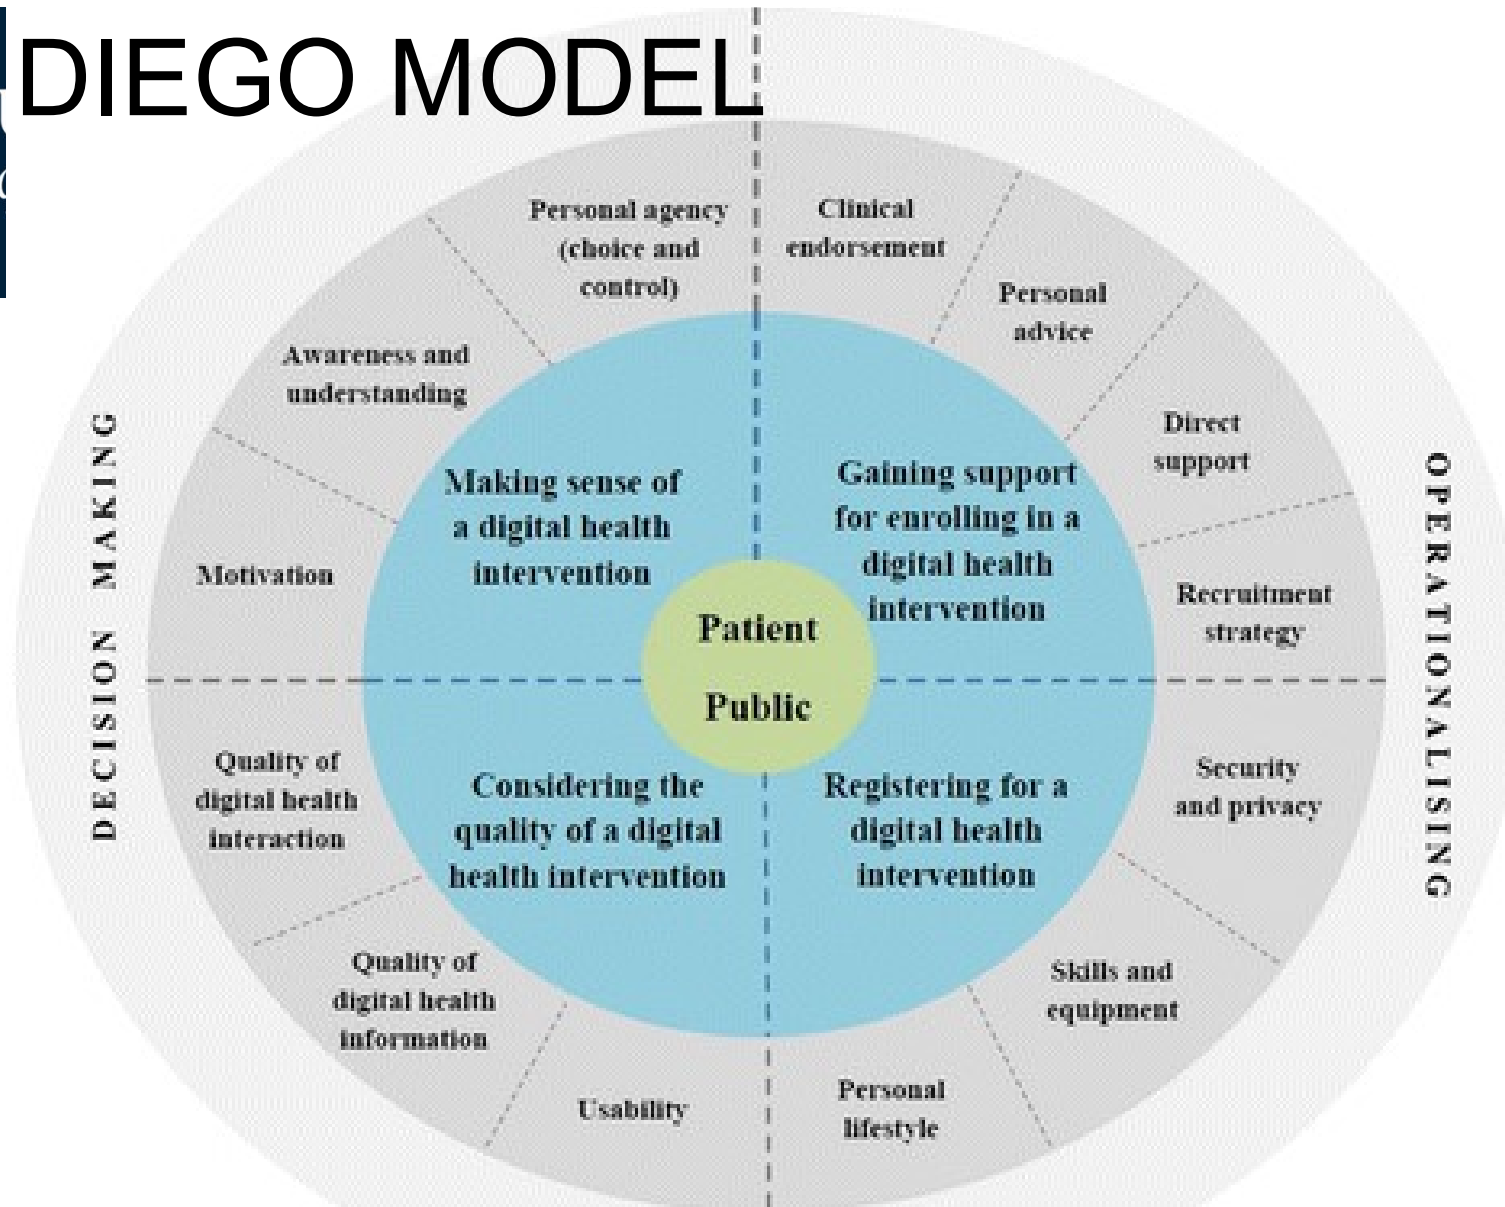

# EMERGING EVIDENCE OF THE VALUE OF INTERVENTIONS TO ADDRESS THESE ISSUES.....<sup>1</sup>

- 1. Leppin A, Gionfriddo MR, Kessler M, Brito JB, Mair FS, Gallacher K, Wang Z, Erwin PJ, Sylvester T, Boehmer K, Ting HH, Murad H, Shippee ND, Montori VM. Preventing 30-Day Hospital Readmissions A Systematic Review and Meta-Analysis of Randomized Trials. *JAMA Internal Medicine*. Published Online May 12, 2014.

# DIEGO MODEL

O'Connor S, Hanlon P, O'Donnell CA, Garcia S, Glanville J, Mair FS. (2016) Understanding factors affecting patient and public engagement and recruitment to digital health interventions: a systematic review of qualitative studies. BMC Medical Informatics and Decision Making 16:120.

- Buying the kit only the beginning.....
- Need to invest heavily in a communication strategy
  - targeting all relevant stakeholders
- Target policymakers to ensure national/local policies support the implementation of the new technology.
- Reconfiguration of services may be reqd/Cost implications
- Education/support essential
- Staff/Public/Patients/caregivers need to be **ENABLED** and not overwhelmed.....

- Frequently, the technology is over-emphasised .
- Whereas the crucially important issue is the ways in which the ways of working need to be adapted to make the new systems work in practice.

University  
of Glasgow

If equipment is simply parachuted into an existing clinical context, the chances for successful introduction and integration of the digital health system as reconfigured practice will be severely compromised.

# CONTEXT

- Understanding current healthcare challenges: Multimorbidity and complex needs
- What are the implications of new Digital Health Interventions for Patients and Caregivers?

## Concluding Thoughts

- Many challenges
- Not insurmountable
- BUT need **ACKNOWLEDGED** and **ADDRESSED** if digital health deployment at scale is to be realised.
- Development and Evaluation with users as partners likely to reap greatest benefit for all.

University  
of Glasgow
